The Turing Testers

# File: average.py
# Written by: Group 26
# Date: Sept. 15 2011
# Description: Takes a set of numbers from the user and averages them

print "How many numbers shall I be working with milord?"
itt = input ("Please tell me a whole number sir.eh.")
if itt<0
    print "But sir that's not valid... "
    print "But I can work with it"
    itt=itt*-1
print "Alright sir. give me numbers."
for i in range (itt):
    total = 0
    total = input () + total
print ("The average of the numbers milord is") + (total/itt)

very clever!
