

# Case Studies

- V System
  - Measure system parameters and broadcast. Each node caches “n best” nodes to migrate a job to. When it gets a new job, checks if it is in “n best” else migrate to one of the others
- Sprite
  - Receivers notify coordinator of status. Sender selects jobs manually. Preemptive transfers to provide “console user” with best service.
- Task Migration Issues
  - Policy mechanism separation, state transfer and restarts, location transparency, performance issues.
