RDFa Lite
What is RDFa Lite?

- RDFa 1.1 Lite is a subset of RDFa 1.1
- Five simple attributes: vocab, typeof, property, resource, and prefix
- Completely upwards compatible RDFa 1.1
- Works well with schema.org terms
RDFa Lite example

The *vocab* attribute sets the default vocabulary for a block, *typeof* sets the class and *property* introduces a property

```html
<p vocab="http://schema.org/" typeof="Person">
  My name is
  <span property="name">Manu Sporny</span>
  and you can give me a ring via
  <span property="telephone">1-800-555-0199</span> or visit
  <a property="url" href="http://manu.sporny.org/">my homepage</a>
</p>
```
My name is Manu Sporny and you can give me a ring via 1-800-555-0199 or visit my homepage.
RDFa Lite example: resource

The *resource* attribute gives an object value (URL) and the *prefix* attribute eases mixing vocabularies

```html
<p vocab="http://schema.org/"
typeof="Person"
resource="http://manu.sporny.org/
prefix="ov:http://open.vocab.org/terms/" >
My favorite animal is the
  <span property="ov:preferredAnimal">Liger</span>
</p>
```
One advantage of Microdata markup was it was simpler than RDFa.
RDFa Lite offers the same simplicity.
But with two advantages:
- You can add statements in other RDF vocabularies.
- You can take advantage of more complex RDFa markup features if and when needed.
