x86 Assembly Language III

CMSC 313 Sections 01, 02

i386 Instruction Overview

i386 Instruction Set Overview

- General Purpose Instructions
 works with data in the general purpose registers
- Floating Point Instructions
 - floating point arithmetic
- data stored in separate floating point registers
- Single Instruction Multiple Data (SIMD)
 - Extensions

3

2

- MMX, SSE, SSE2
- System Instructions
 - Sets up control registers at boot time

UMBC, CMSC313, Richard Chang <chang@umbc.edu>

	CMOVLE/CMOVNG	Conditional move if less or equal/Co not greater	ndhional move if	
	CMOVC	Conditional move if carry		
4				
	5-2			

	int _e l.	INSTRUCTION SET SUMMARY
	CMOWNC	Conditional move if not carry
	CMOVO	Conditional move if overflow
	CMOVNO	Conditional move if not overflow
	CMOVS	Conditional move if sign (negative)
	CMOVNS	Conditional move if not sign (non-negative)
	CMOVPICMOVPE.	Conditional move if parity Conditional move if parity even
	CMOWNPICMOVPO	Conditional move if nor parity/Canditional move if parity odd
	XCHG	Exchange
	BSWAP	Byte swap
	XADD	Exchange and add
	CMPRCHG	Compare and exchange
	CMPXCHGIB	Compare and exchange 8 bytes
	PUSH	Push orno stack
	POP	Pup off of stack
	PUSHAPUSHAD	Push general-purpose registers onto stack
	POPA POPAD	Pup general-purpose registers from stack
	IN	Read from a port
	OUT	Write to a port
	CWD/CDQ	Convert word to doubleword Convert doubleword to quadword
	CBW/CWDE	Convert byte to word/Convert word to doubleword in EAX register
	MOVSX	Move and sign extend
	MOVZX	Move and zero extend
	5.1.2. Binary A	rithmetic Instructions
		structions perform basic binary integer computations on by R, word, and rated in memory and/or the general purpose registers.
	ADD	Integer add
	ADC	Add with carry
	SUB	Subtract
	SBB	Subtract with borrow
	IMUL	Signed multiply
5		

	INSTRUCTION	set SUMMARY intel.
	MUL	Unifield multiply
	IDIV	Signed divide
	DIV	Unsigned divide
	INC	Increment
	DEC	Decrement
	NEG	Negate
	CMP	Compare
	5.1.3. De	cimal Arithmetic
	The decimal arit data.	functic instructions perform decimal arithmetic on binary coded decimal (BCD)
	DAA	Decinal adjust after addition
	DAS	Decimal adjust after subtraction
	AAA	ASCII adjust after addition
	AAS	ASCII adjust after subtraction
	AAM	ASCII adjust after multiplication
	AAD	ASCII adjust before division
	5.1.4. Lo	gical Instructions
	The logical inst word, and doubl	ractions perform basic AND, OR, XOR, and NOT logical operations on byte, levered values.
	AND	Perform hitwise logical AND
	OR	Perform bitwise logical OR
	XOR	Perform biswise logical exclusive OR
	NOT	Perform biswise logical NOT
	5.1.5. Sh	ift and Rotate Instructions
	The shift and m	tate instructions shift and rotate the bits in word and doubleward operands
	SAR	Shift arithmetic right
	SHR	Shift logical right
	SAL/SHL	Shift arithmetic left/Shift logical left
6		
	5.4	

	int _e l.	INSTRUCTION SET SUMMARY
	SHRD	Shift right double
	SHLD	Shift kft deuble
	ROR	Rotate right
	ROL	Rotate (eff
	RCR	Rotate through carry right
	RCL	Rotate through carry left
	5.1.6. Bit and B	lyte Instructions
	The bit and instructions to ands. The byte instruction EFLAGS register.	est and modify individual bits in the bits in word and doubleword oper- ons set the value of a hyte operand to indicate the status of flags in the
	BT	Bit test
	BTS	Bit test and set
	BTR	Bit test and reset
	BTC	Bit test and complement
	BSF	Bit scat ferward
	BSR	Bit scan reverse
	SETENETZ	Set byte if equal/Set byte if zero
	SETNE SETNZ	Set byte if not equal Set byte if not zero
	SETA SETNBE	Set byte if above Set byte if not below or equal
	SETAE SETNB SETNC	Set byte if above or equal Set byte if not below. Set byte if not earry
	SETBISETNAE/SETC	Set byte if below/Set byte if not above or equal/Set byte if carry
	SUTBESETNA	Sut byte if below or equal/Set byte if not above
	SETG/SETNLE	Set byte if greater/Set byte if not less or equal
	SETGE/SETNL	Set byte if greater or equal Set byte if not less
	SETL/SETNGE	Set byte if less Set byte if not greater or equal
	SETLEISETING	Set byte if less or equal Set byte if not granter
	SETS	Sut byte if sign (negative)
	SETNS	Set byte if not sign (non-negative)
	SETO	Set byte if overflow

int _e l.	INSTRUCTION SET SUMMARY
5.1.11. Misce	llaneous Instructions
The miscellaneous executing a "no-ope	instructions provide such functions as leading an effective address, ration," and retrieving processor identification information.
LEA	Load effective address
NOP	No operation
UD2	Undefined instruction
XLAUXLATB	Table lookup translation
CPUID	Processor Identification
5.2. X87 FPU	J INSTRUCTIONS
	tions are executed by the processor's x87 FPU. These instructions operate tegor, and binary-coded docimal (BCD) operands.
5.2.1. Data	Transfer
	structions move floating-point, integer, and BCD values between memory gisters. They also perform conditional move operations on floating-point
FLD	Load floating-point value
FST	Store floating-point value
FSTP	Store floating-point value and pop
FILD	Load integer
FIST	Store integer
FISTP	Store integer and pop
FBLD	Lend BCD
FBSTP	Store BCD and pop
FXCH	Exchange registers
FCMOVE	Floating-point conditional move if equal
FCMOVNE	Floating-point conditional move if not equal
FCMOVB	Floating-point conditional move if below
FCMOVBE	Finating-point conditional move if below or equal
FCMOVNB	Floating-point conditional move if not below

Common Instructions

- Basic Instructions
 - ADD, SUB, INC, DEC, MOV, NOP
- Branching Instructions
- JMP, CMP, Jcc
- More Arithmetic Instructions
 NEG, MUL, IMUL, DIV, IDIV
- Logical (bit manipulation) Instructions
 - AND, OR, NOT, SHL, SHR, SAL, SAR, ROL, ROR, RCL, RCR
- Subroutine Instructions
- 12 PUSH, POP, CALL, RET UMBC, CMSC313, Richard Chang

It evaluates the result for both signed and e OF and CF flags to indicate a carry (overflow) in the The SF flag indicates the sign of the signed result.

The EFLAGS Register

- A special 32-bit register that contains "results" of previous instructions
 - OF = overflow flag, indicates two's complement overflow.
 - SF = sign flag, indicates a negative result.
 - ZF = zero flag, indicates the result was zero.
 - CF = carry flag, indicates unsigned overflow, also used in shifting
- An operation may set, clear, modify or test a flag.
- Some operations leave a flag undefined.

Summary of ADD Instruction

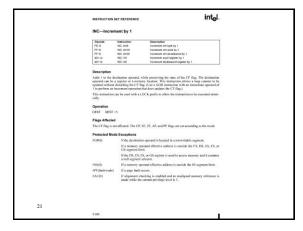

- Basic Function:
 - Adds source operand to destination operand.
 - Both signed and unsigned addition performed.
- Addressing Modes:
 - Source operand can be immediate, a register or memory.
 - Destination operand can be a register or memory.
 - Source and destination cannot both be memory.
- Flags Affected:

19

- OF = 1 if two's complement overflow occurred
- SF = 1 if result in two's complement is negative (MSbit = 1)
- ZF = 1 if result is zero
 CF = 1 if unsigned overflow occurred

UMBC, CMSC313, Richard Chang <chang@umbc.edu>

Branching Instructions

- JMP = unconditional jump
- Conditional jumps use the flags to decide whether to jump to the given label or to continue.
- The flags were modified by previous arithmetic instructions or by a compare (CMP) instruction.
- The instruction: CMP op1, op2
 computes the unsigned and two's complement
 subtraction op1 - op2 and modifies the flags. The
 contents of op1 are not affected.

UMBC, CMSC313, Richard Chang <chang@umbc.edu>

Example of CMP instruction

• Suppose AL contains 254. After the instruction:

CMP AL, 17

28

29

CF = 0, OF = 0, SF = 1 and ZF = 0.

- A JA (jump above) instruction would jump.
- A JG (jump greater than) instruction wouldn't jump.
- Both signed and unsigned comparisons use the same CMP instruction.
- Signed and unsigned jump instructions interpret the flags differently.

UMBC, CMSC313, Richard Chang <chang@umbc.ed

More Conditional Jumps

Uses flags to determine whether to jump
 Example: JAE (jump above or equal) jumps when the
 Carry Flag = 0

CMP EAX, 1492 JAE OceanBlue

· Unsigned vs signed jumps

 Example: use JAE for unsigned data JGE (greater than or equal) for signed data

CMP EAX, 1492 JAE OceanBlue CMP EAX, -42 JGE Somewhere

UMBC, CMSC313, Richard Chang <chang@umbc.edu>

	Table 7-4. Conditional Jump Instructions					
Instruction Mnemonic	Condition (Flag States)	Description				
Unsigned Conditional Jumps						
JA/JNBE	(CF or ZF)=0	Above/not below or equal				
JAE/JNB	CF=0	Above or equal/not below				
JB/JNAE	CF=1	Below/not above or equal				
JBE/JNA	(CF or ZF)=1	Below or equal/not above				
1C	CF=1	Carry				
JE/JZ	ZF=1	Equal/zero				
JNC	CF=0	Not carry				
JNE/JNZ	ZF=0	Not equal/not zero				
JNP/JPO	PF=0	Not parity/parity odd				
JP/JPE	PF=1	Parity/parity even				
JCXZ	CX=0	Register CX is zero				
JECXZ	ECX=0	Register ECX is zero				
Signed Conditional Jumps						
JG/JNLE	((SF xor OF) or ZF) =0	Greater/not less or equal				
JGE/JNL	(SF xor OF)=0	Greater or equal/not less				
JL/JNGE	(SF xor OF)=1	Less/not greater or equal				
JLE/JNG	((SF xor OF) or ZF)=1	Less or equal/not greater				
JNO	OF=0	Not overflow				
JNS	SF=0	Not sign (non-negative)				
JO	OF=1	Overflow				
JS	SF=1	Sign (negative)
