## CMSC 341

## Splay Tree Diagrams

## Bottom-Up Splaying

These diagrams show the rotations necessary for "Bottom-Up" splaying.
Note that these diagrams illustrate the rotations necessary whenever the node to be splayed is a left child. Symmetric rotations are performed when the node is a right child.

## Bottom-Up Single Rotation

## Bottom-Up Zig-Zig

## Bottom-Up Zig-Zag

## Top-Down Splaying

These diagrams illustrate the reorganization of the splay tree as we follow the left-link from a node. Note that symmetric reorganization of the tree occurs when the right-link is followed.

## Top-Down Zig

## Top-Down Zig-Zig

## Top-Down Zig-Zag
